Dear Minister,

As someone with over 40 years working in the Environment

I find it very hard to be still reading Discussion Papers on the way forward

Let me state a known fact and a truth.

If we are not actively increasing and preserving what we already have

We are losing what remains

This is a simple truth and one that is not disputable

Anything other than preservation of the remaining biodiversity is simply not workable

Therefore let us move to consolidate and work cohesively and strategically to

Preserve enhance and increase, Before it is too late

I have years of experience and am qualified to produce a program which seeks to build on what we have.

Yours Sincerely

Nicola Samson M in Env St, Dip Teach Ed.
