

Northern Eyre Health Care is being trialled across six small towns within the Eyre and Far North Local Health Network, the State's most remote region.

Despite vast distances and low populations (around 8,600 combined), these communities deserve the best possible access to health care, the same as all other Australians.

Northern Eyre Health Care is a trial in Streaky Bay, Elliston, Wudinna, Kimba, Cleve and Cowell, to give community members improved access to health service delivery, close to home. Have your say and be a part of the solutions!

Northern Eyre Health Care

Growing health care, close to home

Our team

This project is run by the Northern Eyre Peninsula Health Alliance, a group of representatives from the communities of:

- Streaky Bay
- Kimba
- Elliston
- Cleve
- Wudinna
- Cowell

The Australian Government funds the project via an Innovative Model of Care grant. Eyre and Far North Local Health Network (SA Health) supports as a facilitating partner.

Your team

When you think about it, there is a whole team of people that work on your health and wellbeing - from GPs to nurses, physios to mental health practitioners, and more.

Northern Eyre Health Care is a trial project aimed to better coordinate services in your region, and give you better access to all the amazing professional health professionals on your team.

Engage with us

Do you live within Northern Eyre communities of/around Streaky Bay, Elliston, Wudinna, Kimba, Cleve and Cowell? You are invited to share your needs and experiences of local health care, either online or in hard copy (ask at your local council for a printed version).

How it will work

The Northern Eyre Health Care trial will involve several new approaches to improve access to services, enhance the environment that health professionals work in and attract them to the region.

→ Coordinated services

Building efficiencies with better sharing of information about opportunities to access services throughout the region

→ Upskilling staff

Empowering local nursing and administration staff in providing a more comprehensive level of services

→ Technology upgrades

Empowering patients to access telehealth and other remote services via user-friendly, free and supported technology

The trial of the service delivery model, including these elements, will be implemented over 2025-27 and fully evaluated with aims of sustainability and further development.
